EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a communication with Kevin T. Shaughnessy (Reg. No. 51,014) on 12/13/06. The application has been amended as follows:

In the claims:

In claim 1,

Line 5, "each guide independently slidable relative to the base" has been changed to --each guide independently slides in a plane that is parallel to a surface of the base--.

Line 6, "a scuff surface arranged on said base in alignment with said guides" has been changed to --a scuff surface arranged on the base adjacent the surface of the base and in alignment with the guides--.

Line 9, "on the base plate" has been changed to --on the base--.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance: The claims are allowable because prior art fails to teach that each guide independently slides in a plane that is parallel to a surface of the base and the scuff surface is arranged on the base adjacent to the surface of the base in alignment with the guides, as set forth in claim 1.

Regarding claim 1, Pettigrew (2002/0010031 A1) teaches a cue stick tip sharpener including a base, as arrangement of articulable guides for receiving and aligning a cue stick tip received therebetween. Pettigrew also teaches a cuff surface arranged on the base in alignment with the guides and having a generally hemispheric shape. Pettigrew also teaches the guides and the scuff surface cooperating to maintain a cue stick in longitudinal alignment with the scuff surface on the base. Pettigrew also teaches that the rotation of the cue stick about its longitudinal axis and pressing of the tip thereon against the scuff surface provide a generally hemispheric contour to cue tip.

However, Pettigrew fails to teach that each guide independently slides in a plane that is parallel to a surface of the base and the scuff surface is arranged on the base adjacent to the surface of the base in alignment with the guides, as set forth in claim 1.

None of these references by themselves or in combination with the other prior art cited teach the claimed invention set forth in claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Freedman (3,728,828), Bozarth (2,577,995), Cain (5,129,187), and Tona et al. (6,905,417) teach a cue stick tip sharpener.
